The Yeast & Mold Comparison between TEMPO® and 3M Rapid Petrifilm

Presenter: Maria McIntyre, Cannabis Segment Manager, BioMerieux

Abstract: Yeast and molds are a threat to cannabis flower and pose high risks to consumers. This has created a regulatory framework for specification limits on yeast and mold. It's imperative to have accurate results to fuel products to market while achieving the regulations and simultaneously benefiting consumer safety. Not all testing methods are created equal and a comparison of methods was essential to determine how best to service the industry.
