Interactive Session - The Impacts of Genetic Engineering and Other Technology on Manufacturing and Consumption of Medicinal Products

Speakers:

- **Kellan Finney, Chief Scientific Officer, Eighth Revolution (moderator)**
- **Alisha Holloway, PhD, Chief Scientific Officer, Phylos**
- **Brett McMillen, Cannabis and Hemp Division Manager, Perry Johnson Companies**
- **Dr. Jason Poulos, Director CBx, Lygos**
- **Dr. John Abrams, Chairman & Chief Scientific Officer, The CESC**

Abstract: Technological advancements in cannabis are providing tools to better understand the plant, but what are the implications of these advancements as it relates to the manufacturing and consumption of medicinal products. This discussion is designed to explore real-world examples, technical challenges/limitations, ethical and regulatory issues, and unintended consequences of new technology in the cannabis space. This panel will focus on the future of medicinal products from cultivation to finished product and allow attendees to interact with panelists in an open format to discuss the future of development for medicinal products.
