

Examination of Service-Disabled Veteran MMJ Consumers

1. This test will demonstrate to what degrees, intersecting biological and psychological factors, that Cannabis has a positive or negative effect on Veterans with Tinnitus, PTSD, TBI and/or several other types of injuries.

2. Progressive experimentation is required in order to propel the advancement and availability of medical cannabis, in the federally regulated arena, for all demographics of disabled Veterans.

3. The study aims to reveal effective methodologies to deliver precise relief to this protected population of honorable citizens through trailblazing technology.
